Nureva® HDL200 named Product of the Year**Systems Contractor News recognizes Nureva's audio conferencing system for its impact on the pro AV market**

Calgary, Alberta --- November 2, 2020 --- Nureva Inc., an innovator in advanced audio conferencing solutions, announces that its [HDL200 audio conferencing system](#) has been named a 2020 product of the year by Systems Contractor News. The nominations and selection of winners are determined by an advisory board of integrators and consultants, based on the product's impact on the industry and its unique ability to provide true full-room coverage in virtually any space configuration. Nureva's HDL200 audio conferencing system provides the optimal audio environment for dispersed meetings. With refined aesthetics and 4,096 virtual microphones providing true full-room coverage, the HDL200 system is purpose-built for any space up to 18' x 18' (5.5 x 5.5 m) and it installs easily almost anywhere – on a wall, floor stand or display. The system calibrates automatically and continuously so the room is always ready to go for every meeting style – even if the room is reconfigured.

Powered by patented [Microphone Mist™ technology](#), the HDL200 system and the full line of Nureva's audio conferencing systems bring clear, reliable audio to meeting and learning spaces. Microphone Mist technology fills a room with thousands of virtual microphones so in-room participants can move around, maintain physical distance and still be heard clearly by remote participants. The HDL200 system continues to gain popularity globally, with customers such as [Appleby College](#) and [Kent Police College](#).

"We are thrilled to have the HDL200 system recognized as making a positive impact in the industry," said Nancy Knowlton, Nureva's CEO. "This award reflects the revolutionary capabilities of Microphone Mist technology and its unique ability to make remote meetings easier and more productive, especially during these unprecedented times."

About Nureva audio solutions

Nureva's line of audio conferencing systems solve the frustrating and persistent problem of poor audio performance in meeting and learning spaces from large to small. Nureva's patented Microphone Mist technology places thousands of virtual microphones throughout a space to pick up sound from any location, ensuring that everyone is clearly heard regardless of where they are in the room or the direction they are facing. The systems use sophisticated algorithms to simultaneously process sound from all virtual microphones to provide remote participants with a clear, reliable listening experience. Broad deployment of multiple Nureva systems is supported by Nureva Console, a cloud-based platform that makes it easy for organizations to manage their systems across multiple locations from a single, secure dashboard.
